Curious Observa ions on an Interesting

An English writer on the "Effects of Musical Sounds on Animals" has rule lished some curious observations on this subject. A few of these relating to exen and cows will be of interest.

Opposite to our house was a large field, in which some twelve or think on cows were put during the suren months. One day a German band becan to play on the road which divides the house from the field. The cows were quietly grazing at the other end of the field, but no sooner did they hear the music than they at one advanced toward it and stood with their heads over the wall attentively listen-

This might have passed unnoticed but upon the musicians going away the animals followed them, and when they could get no further stood lowing pit. ously. So excited did the cows become that some of them ran round and round the field to try and get out; but, finding no outlet, returned to the same corne where they had lost sight of the band and it was some time before they seemed satisfied that the sweet sounds were really gone.

I have often noticed the power music has over oxen. The other day we had a brass band playing in our garden. In

a field adjoining were four Scotch oxen. When the band struck up they were at the far end of a nine-acre field, quite out of sight, the field being very uneven. They set off full trot to the garden wall, put their necks over and remained so till the tune was finished. when they went back to graze: but as soon as the music struck up again they came and put their heads once more over the wall. This went on till the band left, after which they ate little all lay, and were continually lowing

There are many anecdotes that show that the ox or cow has a musical car. The carts in Corunna, in Spale, make so loud and disagreeable a creaking sound with their wheels, for the want of oil. that the governor once issued an order to have the wheels greased, but the earters petitioned that this might not be done, as the oxen liked the sound, and would not draw as well without their accustomed music.

A BOY BAROMETER.

An Illinois Youngster's thur as a Weath-According to a correspondent of the

Chicago Inter Ocean University and note boy living on a farm in Cent township, near Mascoutab, 11L, or a er a boy with a remarkable head of hair. His name is Tommy Johnson and he is about fourteen years of a e He is the only son of Frank Johnson, a well-to-do farmer of Centerville township. The boy is healthy and integent and a great deal like other lays, with the exception of his womlerful

The hair is straight and black as that of an Indian ordinarily, but at the up-proach of a storm the hair begins to kink and curl two or three days become hand, and it remains in that committee until after the storm is over, when again it becomes perfectly straight. It the storm is of any magnitude the hair

will curl up into little balls.

The boy's hair is used as a barometer the farmers of that section. If neighboring farmer wants to haul but to town, harvest wheat or anything that makes him particularly interest. in the weather, he calls at the John er home beforehand and looks at Tommy hair. If the hair is straight, the farm er makes his arrangements to do the work; but if the hair is curled, then the work is postponed until after the approaching storm. The people of the vicinity have seen the warning of win and storms verified so often that they have implicit faith in Tommy's hair a a barometer. For an ordinary rain the hair kinks only a triffe.

A few weeks ago it was discovered that Tommy's hair was kinked in hard balls all over his head, and the news spread all over the community in a very short time. The next day a violent storm struck that section, doing considerable damage. After the storm was over the people were greatly relieved. until it was learned that Tommy's bair was curled up more than ever, and then another storm was expected. The second storm was a cyclone. Houses were blown down and several people were badly injured in the neighborhood. After the eyelone Tommy's hair became perfectly straight again, and the people reioleed thereat.

CONCERNING THE STARS. The Word "Fixed" Applied to Heaventy

Bodies Gives a Wrong Impression. Astronomers tell us that the true "fixed" appled to the stars is a wint. for it is now known that there is a fixed star in the heavens, and protno such condition as absolute real in universe. All the stars are in mot. and some of them are moving at the rate of two hundred and fifty thousand miles an hour, or more that thrice th velocity of our earth on its orbit. I might be thought that this common motion would produce continual charge in the stellar relations and alter the face of the heavens every few years. But the vast distances at which the stars are set from us destroy the visueffect of their motion, and preserve the unchanging aspect of the heavens. None of the constellations have sufered a dislocation in three thousand years, Sirius, Arcturus and the Picinde are still in their places. Although the eighty-one stars in Orion have ever bein motion, each without relation to an other, the mighty figure is as it up peared to the man of Uz forty centuries

Growth of the Finger Nalls.

The growth of the nails is more rapid in children than in adults, and slowest in the aged. It goes on more rapidly in summer than in winter, so that the same nail that requires one hundred and thirty-two days to renew itself in winter would do the same work in one hundred and sixteen days in the summer. The increase for the nails of the right hand is more rapid than the left. It also varies in the different fingers, the vari tion being so as to correspond with the length of the finger. Thus, it is most rapid in the middle finger, nearly equal in the index and the ring finger, slower in the little finger, but slowest him to change his residence.

CURLING THE MUSTACHE. Some Points on the Custom Given by a

"How long has the custom of crimp-

ing the mustache been in vogue?" was asked a dapper little barber who runs a shop on Washington street, says the "It was first introduced in the United

States about four years ago," he re-"but it was known in Europe half a century back." "Does the crimping of the mustache

injure the growth in any way?"

"Yes, very seriously. You see, hu-man hair is naturally oily, which indi-entes a healthy growth. If a single hair is placed under a powerful microscope it will be found to resemble a pipestem-that is, a little tube runs its entire length. Through this channel flows a current of oil. Now, if this is dammed up, it has the same effect as binding the stalk of a plant; the ripe sap is cut off and decay follows. Therefore, in ninety-nine cases out of one hundred, where the mustache is erimped it finally begins to fall out,

not obtain, which accounts for the exceptions named." Do all your customers have their mustaches curled?"

much to the grief of its owner. Where

there is unusual vigor this result does

"Oh, no: it's the middle-aged and ung fellows who earry the style. When a man begins to wrinkle up and his knee joints begin to rattle he cares very little for those finer points in his personal appearance." "Do the dandy police officers like to

have a curl put into their whiskers?" "Do they? Well, I should think so, There are some very handsome men who wear the uniform of the city, and when they go on duty they look as neat as wax. A low-hanging mustache would not harmonize with the ensemble of these stoleal guardians of the peace. It is seldom one of them goes out on an ostensible hunt for crime with his mustache in the condition de-

PARISIENNES AT THE BATH. Public Bathing in the River Seine-Many Freuchwomen Expert Swimmers.

The Seine is a narrow, greenish. snake-like river, and it doesn't look inviting from a distance. But on entering the swimming baths formed of boatlike sides, containing the dressing rooms, it looks clear and cool, says a Paris correspondent of the Providence Journal, Black bathing dresses trimmed with red braid can be hired for a franc upward, and hundreds of ladies, with their children, daily afford themselves amusement at these places. There is no effort at fashion, gentlemen not admitted, and the top being covered by canvas to shield them from the eyes of the people on embankment or boulevards. Swimmers among the attendants are frequent, and they dive and

float, swim and sink at will, and teach the children and ladies to do the same. Some of the Frenchwomen are expert swimmers, and they go around in their black, baggy suits, chasing about the platforms, eating sandwiches or drinking penny sirups or clarets, and end the performance by diving into the water and swimming a race. Trapezes, swings, etc., are suspended above the water and gymnastic exercises are

indulged in by the younger and more

On leaving the baths they dry their hair sufficiently, put a crimped per-ruque over their own straight locks, a dash of powder and a bit of lip salve (a stick of which every Frenchwoman carries in her pocket) to slightly color and eliminate any dryness, and with a deft adjustment of the inevitable black veil, my lady is well coiffed-and if her dress be suitable, can take a drive before going home.

As regards literature generally, it may be safely said that no work destined to live was ever produced by a very young in vi or wom in. The greatest promis of Milter and Deyden, of Wordsworth and Coloridge, of Tennyson and Browning, were produced when they were past middle a.je. The same may be said of the novels of Scott, Dielens, Thackeray, George Eliot and Charles Reade; in fact, as regards fietion, it may be safely said that while a romance or a sentimental poem may be produced by a man or a woman in youth, no picture of life as it is can be drawn until experience aids aptitude and literary labor has achieved style. Therefore the ladies who fail as novelista may find a consolution not to be de-spised in reflecting that they are altogether too young.

The Banana Sapply. It is not without good reason that the banana has become so popular in recent years. For it is said to possess in itself all the essentials to the sustenance of life for both man and beast. It belongs to the tily family, and is a developed tropical lily, from which by ages of cultavation the needs have been eliminated and the fruit for which it is cultivated greatly expanded. In relation to the bearing qualities of this fruit, Humholds, who early saw the wonders of the plants, said that the ground that

would grow 00 pounds of potatoes would row as pounds of wheat, but that the une ground would grow 4,000 pounds of bearing, consequently to that of it's at it 103 to 1 and to that of potaoca #1 to 1.

A Dog's Love for a Bell. That dogs become quite attached to other things than men and places is learly proven by the conduct of Will Phornton's pointer dog Leo, says the Falbotton (Ga.) New Era. Before the Thornton house was burned Leo made hat hotel his headquarters, and always appeared there regularly at meal times be fed. Several weeks after the burning of the hotel the bell which had been used on the Thornton house was placed on the Weston house, and the first time this bell rung after its removal Leo was seen to run over to the Weston House, where he showed unmistakable signs of joy at the familiar sound of the bell. He had never shown any fondness for any person at the Weston house, and the fact that he has deserted his owner and taken up at the new place since the first day the bell was put up proves beyond a doubt that

his attachment for the old bell caused
